Introduction

In many rural and urban areas in Sri Lanka, farmers and customers face difficulty accessing reliable and updated vegetable prices. They have to rely on physically visiting economic centers or directly contact shops to find out daily vegetable prices. This often leads to unfair pricing and market inefficiencies due to miscommunication and basic human errors. As a result, understanding the real-time market conditions and anticipating future price trends becomes a challenge. As a solution for this, we propose a web-based platform that provides a daily updated digital price list of vegetables, accessible to both farmers and consumers.

1. Purpose

This proposal aims to outline the development of a user friendly web-based platform that displays daily updated wholesale vegetable prices to farmers and customers. By offering real-time price data, the platform will empower farmers to analyze market trends, optimize their harvest schedules, and make smarter sales decisions. Consumers and retailers, in turn, will benefit from increased price awareness and the ability to compare costs over time.

2. Project Title

AgroPulse: Smart Vegetable Price Viewer

3. Project Aim

To develop smart, accurate and daily updated wholesale vegetable price viewer

4. Project Objectives

General Objective:

- To design a responsive website for viewing daily vegetable prices

Specific Objectives:

- To create an admin panel to update prices easily
- To provide multi-language support (Sinhala, Tamil, English)
- To ensure mobile accessibility for rural users
- To help farmers make informed pricing decisions

5. Project Scope

This project will focus on developing a web application only. It will not include mobile apps or payment features. The site will display prices and offer basic data management tools.

6. Methodology / Approach

- Requirement gathering
- Tool selection and research
- Website design and development
- Admin panel creation
- Testing and feedback collection
- Final report and presentation

7. Expected Skills to be Developed

- Web development (HTML, CSS, JavaScript, PHP)
- Team collaboration
- Time management
- UI/UX design
- Problem-solving and critical thinking

8. Tools / Technologies (if any)

- Visual Studio Code
- MySQL
- PHP
- GitHub
- Canva / Figma for design

9. Deliverables

- A well functioning website which displays daily vegetable prices
- Admin dashboard for updating prices
- Final project report and presentation
